

FCC,

Please reject NAB's petition 04-160. I pay to listen to satellite radio because it offers information that I can not get from local radio stations in my area. The localized news and weather is very beneficial and can be instantly accessed instead of trying to listen to a local AM/FM channel that is segmented with 'snippets' of local news, weather, and traffic. The radio stations in my area only report the rumors about famous people or entertainers and provide no real and informative news. And the quality of their service is very poor. I decided to purchase satellite radio services because the 'free' radio is clogged with commercials, are biased, and do not provide entertainment or informative information. I am insulted to find out that National Association of Broadcasters is trying to block satellite radio and their success. If broadcasters are losing listeners then maybe they should improve their services. I'm sure people would rather get quality radio for free, but many people can't so they have began purchasing the service as I have.

Thank you for your time,

Wendy Hughes
